Mod File Mismatch and can't join server

This is a pretty common issue and unfortunately there's no easy way to fix it. First: Unsub from all mods via the workshop.

https://www.youtube.com/watch?v=c3jtRUiuJzU&t=7s&ab_channel=TroubleChute Then, use this collection to download all the mods the server uses, this is significantly faster than doing it in game, because steam handles the download and not the game.

https://steamcommunity.com/sharedfiles/filedetails?id=3233856529 After that, try to rejoin, I know this sucks, but there's far to many variables to track down the actual issue, because the file it's saying is *not* the file that's actually having the issue.
